PROGRAM DESCRIPTION

This program is designed to assist participants in approaching the individual patient with cardiovascular disease and will cover the presentation of typical patients with common cardiovascular conditions.

LEARNING OBJECTIVES

After participating in this CME activity, clinical participants should be able to describe and discuss:

- how to identify and implement strategies to reduce stroke/embolism risk in Afib patients
- advances in device-based therapy options for arrhythmia patients
- resources available for patients with PTSD
- specific pharmacological interventions to reduce risk for CAD patients in office-based practice
- available testing options and risk stratifications for patients with chest pain who are low risk for CAD

TARGET AUDIENCE

Practitioners who care for patients with acute and chronic cardiovascular conditions, including cardiologists, internal medicine specialists, primary care providers, family physicians, nurse practitioners, and nurses.
