(CT) Cardiac Computed Tomography

Fellows have the opportunity to learn cardiac computed tomography during their senior year of training. This rotation is off-site at Tri-Star Hendersonville Medical Center. This is a busy private cardiology practice where fellows will have the opportunity to witness the acquisition and reading of cardiac computed tomography angiography in a "real-world" setting. Fellows will review and generate their own reports with feedback from members of the practice. There is also a didactic series including topics such as the physics of CCTA, coronary artery disease pathology, and valvular findings.
